Description

Take Control of Your Inventory

A Cost Effective And Easy To Use Inventory Tracking Program

Program Overview

Inventory Items

Easy Track allows for the creation of two different types of Inventory Item

1. Standard Inventory Item. These items can be moved or relocated between multiple locations in any direction.
2. Composite Inventory Item which consists of multiple standard inventory items with attached quantities that the user specifies. These composite inventory items standard inventory items can

be manufactured on demand and can be moved or relocated between multiple locations in any direction.

Inventory items can be allocated an existing barcode number or Easy Track can generate and print its own barcodes using a label printer.

Access to the inventory module can be controlled by user via the security module in Easy Track.

Inventory Locations

Inventory Locations can be created on demand and be representative of a physical location, a supplier, a person, job card number or anything you require the location to be.

Stock Take Can be performed on any created location and then be reported on.

Access to the location module can be controlled by user via the security module in Easy Track.

Inventory Relocation

All inventory items can be relocated by scanning the inventory barcode number or searching for the inventory item by description or barcode number. Provision is made for two references for the two locations being used and the use of these references can be enforced in the program setup.

Inventory Items can be created on the fly while relocation is being done.

An Inventory Relocation receipt can be printed on completion of the relocation and the automatic printing of the relocation receipt can set in the program setup.

Reporting

Inventory Relocation Transaction Report By Date Range

Inventory Relocation History Report By Inventory Item By Date Range

Typical Usage Scenarios

Scenario1

Feeding Scheme

Inventory items are relocated from a Supplier Locations into the Main Store Location. Composite Inventory items are created and manufactured. The manufactured items are then relocated from the Main Store Location to Recipient Locations that have been created.

Easy Track will track and report on all relocations that have been done as well as the current inventory stock on hand levels at all relevant Locations that have been used.

Scenario2

Text Book tracking at a School

Various text books are created as inventory items. The text book inventory items are relocated from Supplier locations into the Main Store location. The learners are created as locations and the text book inventory items are relocated to the Learner Locations as required. At the end of the semester the text book inventory items are relocated back from the Learner locations to the Main Store Location.

Easy Track will track and report on all relocations that have been done as well as the current inventory stock on hand levels at all relevant Locations that have been used.
